

# LETTERHOLDERS & LETTERS

## Problem Solved

E-Z Trac was designed to solve many of the problems associated with changeable letter readerboards. Looking at the photos below, you probably recognize a few of these common issues.

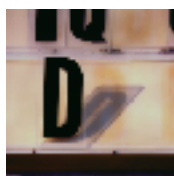

suction cup problems

dirt and ice behind rail

letters behind rail

blown out letters

broken letters and rails

## Saves Money

*E-Z Trac Reduces or Eliminates*

- replacement letters
- damage to your sign
- time needed to change a message
- possible injury from ladder

## Why E-Z Trac?

Whether your looking to create a new sign or improve an existing, E-Z Trac is the system for you. Not only does it solve typical readerboard problems, but it also offers the option to use full color graphics and eliminates the need for a vandal cover.

*E-Z Trac works with typical (6 on 7in) and (8 on 10 in) changeable letter systems. It is available in standard lengths of 7'-6" for an 8' cabinet and 9'-6" for a 10' cabinet.*

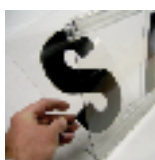

## How It Works

The key to the E-Z Trac System is it's patented whole line letterholder, which installs an entire line of text at one time, instead of letter by letter.

## 3 Step Install

- 1 Choose the appropriate letters and/or graphics from the E-Z Trac letter bin for your desired message

- 2 Then insert your letters and/or graphics into the patented E-Z Trac letterholder.

- 3 Finally, using the E-Z Trac install tool, raise the letterholders to the sign and install them into the sign rails.
