

Eliminate Vandal Covers

E-Z Trac has developed a unique and effective locking system for use with low at risk signs.

The E-Z Trac locking system is simple and easy to use. Aircraft quality camloc receptacles are anchored to the sign face near the ends of each letterholder. Stainless steel camloc studs with vandal deterrent Torx heads are affixed to the letterholders. Using a supplied Torx head driver the studs are turned and locked into the receptacles which secures the letterholders to the sign face.

The E-Z Trac Advantages

- Less expensive than the old vandal covers
- Set-up your message indoors
- E-Z to use, high quality stainless steel locks
- Does not detract from the sign's appearance
- Effective in deterring vandals
- Eliminates the old vandal covers

Save yourself the expense and the aching back by choosing E-Z Trac's Locking System for your next low profile monument sign. It's the simple, yet effective way to deter vandalism of your customer's sign. For more detailed information on the E-Z Trac Locking System try out our interactive CD or visit us online at www.e-ztrac.com

E-Z Installation

E-Z Trac's locking system is sold per each line of text, with the locking units preinstalled on both ends of the letterholder. Also supplied are the locking receptacles, rivets, and torx driver. You simply align the supplied template which indicates your drilling locations, install the receptacles with the supplied rivets and you are done.
