

Q E-Z Trac with existing sign

A The E-Z Trac system will retrofit most existing changeable letter sign rails. E-Z Trac will pay for itself with cost savings. Broken letters and broken sign rails will not need to be replaced, employees will require 50% less time to change messages.

Q Can I use my existing letters?

A Unfortunately, no. In our experience other letters will be too thick to work with E-Z Trac.

Q Letters breaking

A E-Z Trac's letters are break resistant. They are made of polycarbonate, one of the strongest - most resilient - plastics available. The E-Z Trac's letterholder is also polycarbonate.

Q Replacing letters

A Since our letters are break resistant, they should not need replacing.

Q Weather

A During inclement weather, letters/messages can be installed indoors into the E-Z Trac Letterholders.

Q Time/ Labor

A Changing messages now takes approximately 50% less time.

Q Changing the message

A Changing the messages are easier and take less time therefore employees will change the messages more often. Your sign will become more effective.

Q 30 Day Money Back Guarantee

A If the end consumer finds our product unsuitable you may return our product and we will refund your money. (The return deadline is 30 days from the date the product is shipped.)

Q With the color graphics inserts do I need an E-Z Trac system?

A Yes, the color graphic inserts were designed to be used in conjunction with the E-Z Trac letterholders. The color graphics inserts are installed in the letterholders in the same manor as the E-Z Trac letters.

Areas of Caution

WARPED SIGN FACES

We have seen instances where readerboard signs have convex or concave sign fronts. If these conditions exist to an extreme, the E-Z Trac letter holder may not install properly. The sign face can possibly be adjusted or replaced to address the problem. If that is not an option remember that E-Z Trac has a 30-day money back guarantee.

HIGH WIND

We recommend that the E-Z Trac system not be installed or changed during periods of high wind. We also recommend the system not be used at locations where high winds are the norm. High winds can make the letterholder unwieldy to use.

SIGN RAILS IMPROPERLY SPACED

E-Z Trac fits most existing sign rails for 6 and 8 inch changeable letters. In order to properly use the E-Z Trac system, the track spacing should be set at the usual spacing for 6 inch letters - 6 ¼ inches, for 8 inch - 9 ¼ inches. E-Z Trac does not fit "8 on 9" sign rails. We have encountered a few instances where a non-sign professional has repaired or replaced broken sign rails without using the correct size spacer. The end result can be sign rails that are too narrow for the E-Z Trac letterholders to fit. In these cases the sign rails should be moved or replaced by a sign company professional back into spec.

HEIGHT LIMITATIONS

We recommend that the E-Z Trac system be used to a maximum height of 15 feet.
